DETAILED ACTION

Drawings

The drawings are objected to because they contain handwritten writing. In order to make them easier to read, please type all labels. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

Claims 1-17 are allowed.

In regard to claim 1, the prior art does not teach or render obvious performing a visual comparison at the selected test point by adjusting the display input value of the test point until a perceptual match is made between the displayed test point and the displayed visual test pattern, accepting an adjusted test point as a new known control point, and repeating steps 2 through 7 at least one for further refinement of the approximating spline and in the combination as claimed.

Claims 2-17 make claim 1 more specific and are also allowable.

Other pertinent prior art includes:

Opsal et al. (20040122599) discloses an apparatus for using a spline algorithm that has multiple control points for controlling the curves of a grating profile.

Ide et al. (5933549) discloses a method and apparatus for image editing using key frame image control data. Users control points from the first interpolation as control points in the second interpolation.
